

You can help in the fight to stop crime, too!

OUR PLEA:

Although some funding for these programs is designed to come from government grants and other funding sources, we still need your help right now with the following:

MONEY: Your fully tax-deductible* donation of any amount will help to keep our research teams working on the background information required for acquisition of Federal, State and Local funding for these important programs. You can even donate online at: www.protectivesciencedynamics.org

EQUIPMENT: Office equipment, furniture, computers, ink cartridges, office supplies, and general office software. Transportation assistance in the form of vehicles appropriate for Law Enforcement use are needed for testing of new technologies before they can be approved for field use.

SERVICES: Printing, copies, and other business services are greatly needed from our business partners in the community to cover fundraising, educational materials, and other vital needs.

PLEASE HELP US TO HELP YOU!

PROTECTIVE SCIENCE DYNAMICS is a non-profit corporation with full IRS status as an IRC 501(c)(3) public charity. All donations are fully tax-deductible. Consult your Tax Professional for guidance.

***THE SOLUTION IS NOT ABOUT
FIGHTING CRIMINALS -
IT'S ABOUT FIGHTING CRIME!***

YES, CRIME...

It affects you, me, and everybody around us. It is very easy to just look at the surface and support more law enforcement on the streets and building more prisons. But when you look deeper, the truth becomes much more complex.

Protective Science Dynamics was created by professionals in the fields that know from decades of firsthand experience just how these problems affect our community and have become dedicated to studying, developing, and implementing the evidence based solutions to correct the underlying problems that cause crime.

Protective Science Dynamics was formed to look for crime solutions without the ideological problems that all too frequently plague our well-intentioned government attempts at crime control. We are not afraid to examine both sides of the crime equation as we believe that no single approach is always effective in all cases... Sometimes our research indicates better treatment programs to prevent recidivism, sometimes we find more innovative street enforcement techniques to be our best direction, in other cases we find better use of technologies to ease the burden on Law Enforcement Personnel and increase their effectiveness. Whether applying non-judicial or judicial methods our goal remains the same - ***safer communities with less crime to victimize the innocent.***

Through research, development, implementation, and evaluation of promising new programs, technologies and techniques, we will find the solutions that work in our communities, together.

Sex Offender Complex Pilot Housing Program

Nobody wants a convicted sex offender living near their family. Our laws continue to become stricter and stricter regarding where these offenders cannot live... But then, where *can* they live? With this program, we offer the potential solution of *secured* housing of the most hated of offenders with an eye towards immediate prevention of future offenses, anti-recidivism counseling, sobriety maintenance, and even medical study of potential future treatments to reduce risks of reoffenses!

Statistical Analysis of Private Law Enforcement

Everybody knows that Private Security is everywhere... But how helpful is it really? How effective can it be in our fight against crime? Is this the true 'front line' of the future of Law Enforcement? Precious few studies have been performed on the extent of our Private Law Enforcement Community. Could this frequently overlooked but growing field be the keystone of a solution to the problem of acquiring better street-level enforcement in our communities? Let's find out!

Treatment Alternatives to Prevent Recidivism

Most crimes today have drugs and/or alcohol behind them at one level or another. Why incarcerate these offenders if we can recover and reintegrate them? This full 5 year program, with full checks for compliant progress included, provides for detoxification, treatment, re-education, and eventual reinstatement of these existing and potential offenders into our community as law-abiding, property owning, tax-paying citizens!.. This program will make enemies into allies in our fight against crime.

Private Law Enforcement Academy Establishment

In conjunction with the findings of the statistical analysis, we propose establishment of an academy to train Private Law Enforcement Officers to at least current Public Peace Officer standards. Once operating, the gap between public and private law enforcement can be reduced to where cooperation is attractive to both sides. Our research has proven that when cooperative use of the differences in powers is achieved, criminals don't stand a chance against this well-forged team of professionals.

Community Security Enforcement Program

Designed to draw upon the knowledge gleaned from the Statistical Analysis Study and the utilization of professionals trained at the newly established Private Law Enforcement Academy, we will deploy the finely honed sword of this carefully crafted, and field tested, enforcement-based program to strike hard at the very heart of the most crime-ridden areas of our communities with comprehensive street-level enforcement supported with newly established alternative crime reduction programs.

Juvenile Camps Reevaluation Study

According to the NIJ, boot camps were found to be too brief to exert a lasting effect on inmates post release, lacking in a strong treatment model, and insufficient in preparing offenders for reentry into the community. But the potential of these types of programs is too great to just toss out as ineffective. This study reevaluates just what went wrong with these promising programs and looks into adding new preventative programs to enhance this program's effectiveness to save at-risk youth.
